

How to resize an image for digital competition entry

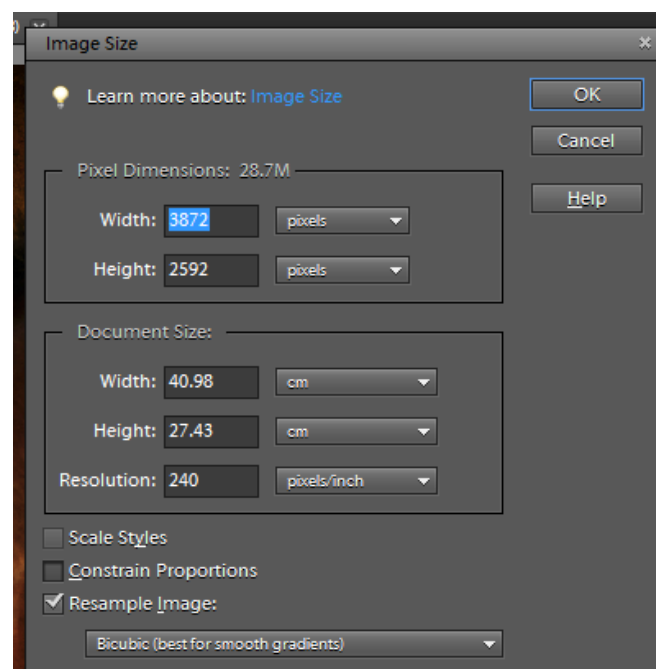

Landscape image

Open the image Photoshop

Click Image >> Resize >> Image size

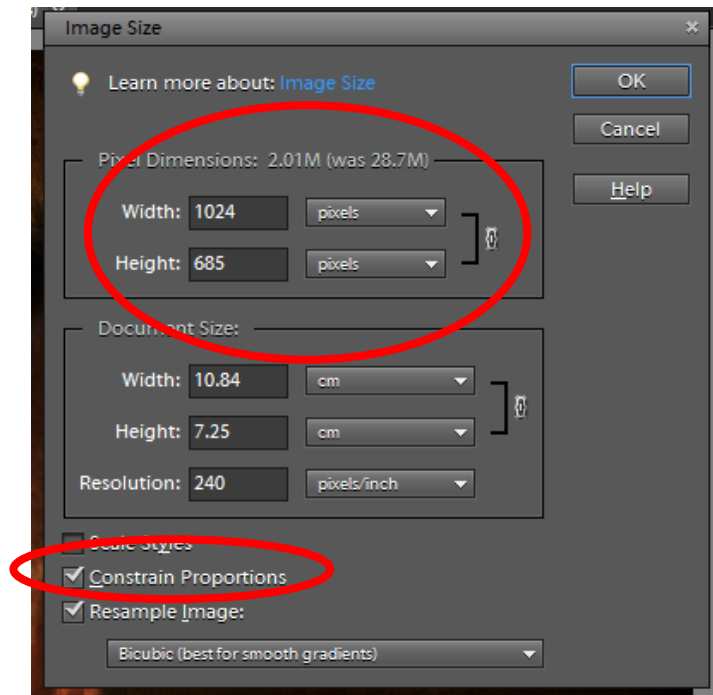

A window similar to the image below should appear

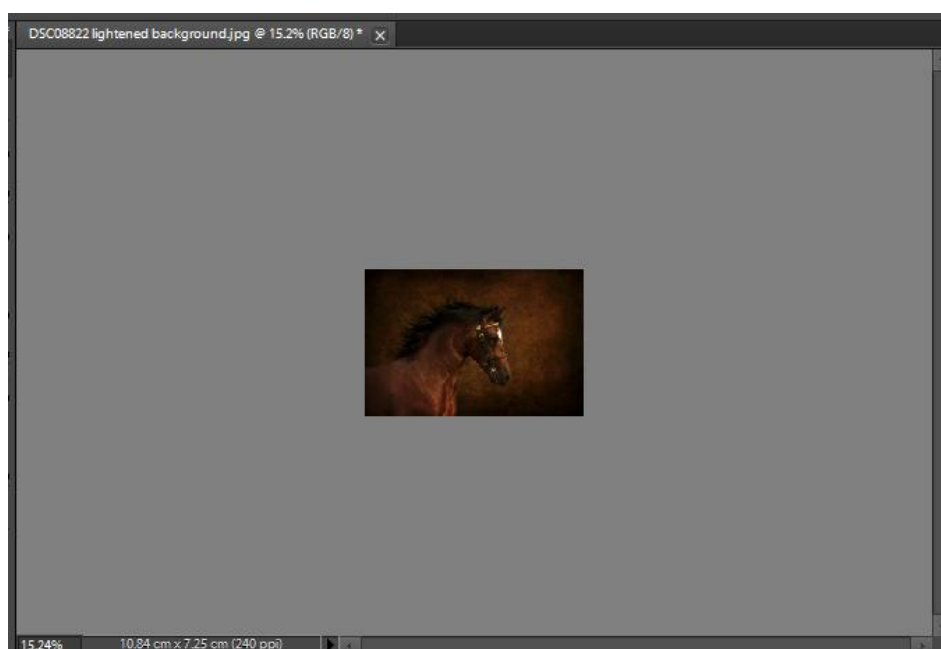

Make sure that the Constrain Proportions box is ticked

Change the value in the width box to 1024 pixels, the height will automatically adjust (and should be below 768 pixels, if it is not, change the value of the height to 768 and the width will automatically adjust to a value below 1024)

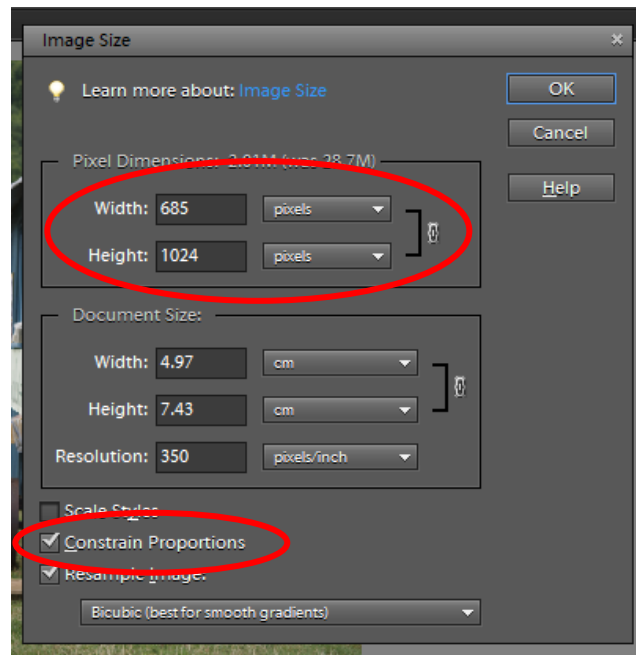

Click ok and the image will shrink to a smaller size (yes this is correct), these size guides are so the image projects correctly on our equipment

Portrait image

Make sure that the Constrain Proportions box is ticked

Change the value in the height box to 1024 pixels, the width will automatically adjust (and should be below 768 pixels, if it is not, change the value of the width to 768 and the height will automatically adjust to a value below 1024)

Click ok and the image will shrink to a smaller size (yes this is correct), these size guides are so the image projects correctly on our equipment
